

Commercial Roofing,
Siding
&
Sheet Metal Systems

New Roof Installation

Shorex Weatherproofing has extensive experience in all types of roofing applications and can recommend the right system for your budget and performance requirements.

We are qualified applicators of a multitude of high performance roofing systems, including; conventional 4-ply Built-Up-Roof system, 2-ply modified bitumen membrane, all single ply membranes including PVC, TPO and EPDM and sheet metal roofing and siding.

Roof Replacement

Roofing systems fail for a number of reasons including age, severe Canadian weather, improper design, lack of maintenance, poor workmanship or inferior roofing material.

From townhouses and condominiums to office and retail projects, we fully understand and respect the concerns of your tenants when it comes to access and inconvenience. That's why we work efficiently and in close cooperation with building and property managers to ensure that the commercial roofing job is done right, quickly and with the minimum possible disruption to occupants.

Preventative Maintenance

The most effective way to reduce your average annual roofing costs and extend the life expectancy of your roof is through a program of semi-annual preventative maintenance. Proactive strategies more than pay for themselves by reducing emergency repair costs and disruption to your core business or tenants and by adding several years to the life of your roof.

Emergency Service

Roofs leaks can be very disruptive to the occupants and their business and can impact relationships between tenants and landlords if not repaired quickly. Roof leaks can also cause considerable damage to the building envelope and will lead to premature failure of the roof system.

Shorex is committed to providing the very best customer service in the industry. Our dedicated Service Department is available 7 days a week for emergency leak repairs, remediation of wind and water damage, projection installations, maintenance, and general roof repairs.

Sheet Metal

As a roofing contractor specializing in all roofing applications, Shorex also offers our clients the advantages of a full-service, in-house sheet metal roofing division. Whether incorporating custom copings and flashings or architectural metal roofing and siding panels as part of your roofing system, Shorex is a roofing contractor ready to exceed your expectations

Our sheet metal capabilities include:

- Architectural metal panel systems
- Fabrication and installations of metal flashings, copings, and roof accessories
- Metal roof repairs
- Copper installation and repair
- Metal siding installation and repair
- Custom soffit, fascia, seamless eaves trough and rainwater leaders
- Polycarbonate multiwall sheet systems

Consulting

Our experienced staff is qualified to conduct comprehensive inspections of your I.C.I. facility and provide you with a detailed Roof Condition Report. These reports are generally provided free of charge and include details such as the size, age, composition, thermal efficiency, current condition and life expectancy of each roof section, complete with photographs of anomalies and maintenance items. Also included are specifications for repairs, maintenance and complete roof replacements with a multi-year schedule for maintenance and capital budget.

Ontario Earth Systems

Ontario Earth Systems provides Roof Consulting and installation services to Solar Photovoltaic companies throughout Ontario, focusing on mitigating the risk associated with rooftop installations. We are fully insured and our employees are covered by the correct WSIB rate group for roofing, something that most Solar PV companies do not have.

We are licensed and qualified to perform Energy Audits, helping our clients navigate through the various Government rebates and incentives available to I.C.I. industries. We develop and install systems to help you cut energy costs, which is good for business and the environment.

As members of "Green Roofs for Healthy Cities" and with a thorough understanding of all roofing systems and green roofing applications, we have the expertise and experience to take care of all aspects of your Green Roof Project, from design to installation:

- * Design assistance
- * Installation & warranty
- * Intensive and extensive systems
- * Service & maintenance
- * Complete hard and soft landscaping
- * LEED credit compliance
